

SUMMARY

Full Stack Engineer – Generative AI & Voice Systems with hands-on experience building production-grade AI applications using LLMs and real-time voice agents. Strong background in MERN stack development, Kubernetes-based deployments, and performance optimization. Experienced in designing scalable APIs, integrating AI models into real-world workflows, and operating cloud-native systems with high reliability.

SKILLS

- **Generative AI:** LLMs, OpenAI API, RAG, Prompt Engineering, Agent Workflows
- **Voice AI:** Real-time Voice Agents, Twilio, Speech-to-Text, Text-to-Speech, Conversational AI,ElevenLabs
- **Frontend:** React, HTML, CSS, JavaScript, Webpack, Rspack
- **Backend:** Node.js, Express.js, Python, REST APIs
- **Databases:** MongoDB, Vector Databases
- **Cloud & DevOps:** Docker, Kubernetes, AWS, Azure, CI/CD, Nginx

WORK EXPERIENCE

Full Stack Developer | VoxyHealth (klenty) | Nov 2025 – Present

- Designed a workflow builder enabling LLMs to perform complex multi-step voice workflows.
- Built an automated code review agent, reducing manual review effort and improving code quality.
- Developed a real-time AI voice agent using Pipecat and open-source models.
- Delivered a proof of concept for an AI-powered Smart Call Agent using Twilio and ElevenLabs.

Full Stack Developer | Klenty | March 2022 – Oct 2025

- **Cloud Infrastructure & DevOps**
 - Collaborated with DevOps to migrate production from Heroku to Kubernetes, implementing zero-downtime deployments and health probes to prevent gateway timeouts.
 - Collaborated with DevOps to migrate cloud-based solutions such as Redis, RabbitMQ,Meilisearch and Vault to self-hosted infrastructure.
 - Designed and implemented a custom domain tracking system in Kubernetes for customer mail handling, SSL management, and domain orchestration..
- **Performance Optimization**
 - Reduced frontend build times by 70% (Webpack → Rspack), boosting developer productivity by 80%.
 - Cut TypeScript compilation from 2 minutes to 0.25 seconds using Rust-based SWC, accelerating backend testing and deployment.
 - Resolved a frontend memory leak in the Twilio package, eliminating customer complaints about slowness during heavy call usage.
- **Incident Response & Debugging**
 - Mitigated a Redis overload during a DDoS attack, optimizing session handling and reducing Redis load by 90%.
 - Fixed critical production issues, including Kubernetes authentication cookie failures, AWS Lambda deployment crashes, and Nginx proxy misconfigurations..

Tech Blogger | Dev.to, Medium, Personal Blog | 2024 – Present

- Share insights on debugging, infrastructure challenges, and automation in tech.
- Created a **Sherlock Holmes-inspired debugging series**, making technical issues engaging.

MERN Stack Developer | ChefAtHome FoodTech LLP | March 2021 – September 2021

- Strengthened platform security by addressing vulnerabilities, increasing security robustness by 80%.
- Refined database queries, decreasing response times by 45%.
- Ensured ACID compliance for critical transactions to maintain data integrity.

ACHIEVEMENTS

- **1st Place – DinoDial Hackathon (2025)** – Developed an end-to-end voice AI workflow using DinoDial to automate HR screening interviews.
- **Culture Champion (Klenty 2023 & 2025)** - Recognized for fostering a high-performing team.
- **Star of the Month (ChefAtHome)** - Awarded for outstanding performance during the internship.
- **Hacktoberfest (2020/2023/2024)** - Successfully contributed to open-source projects in an event by DigitalOcean.
- **1st Place - Code Debugging (2018)** - Einstein College of Engineering.
- **1st Place - Tech Fest Quiz (2019)** - VV College of Engineering.
- **1st Place - TechTonic (2019)** - National Engineering College.
- **3rd Place - KIT Hackathon (2019)** - Kalasalingam Institute of Technology.

EDUCATION

Computer Science Engineering | CGPA: 8.2 (2018–2022)

Einstein College of Engineering, Tirunelveli, Tamil Nadu

PROJECTS

- [HiringAI](#)
 - AI-powered telephony platform designed to revolutionize the recruitment process by automating the initial phone screening round.
- [PromptEval](#)
 - Frontend-only LLM prompt evaluation, auto-eval, and style simulation platform for rapid testing and comparison across models.
- [CallCoach – AI-Powered Sales Call Analyzer](#)
 - Developed an AI-driven coaching tool to transcribe and analyze sales calls for real-time feedback.
 - Showcased at the AssemblyAI Hackathon, highlighting AI-driven business enablement.
- [Call Agent – AI-Powered Automated Calling](#)
 - Engineered an AI-powered voice bot using Twilio & Eleven Labs to automate customer interactions.
 - Minimized customer service response times by 40% through AI-driven automation.
- [RAG – Retrieval-Augmented Generation](#)
 - Designed a UI application to explore RAG model capabilities for the Dev.to hackathon.
 - Implemented chat interactions with website content, files, and Dev.to articles.
 - Integrated OpenAI and OLLAMA for diverse language model support.
 - Added customizable text chunking and PGVector with PostgreSQL for optimized data retrieval.
- [Hirezen](#)
 - A Chrome Extension that assists interviewers by generating AI-based, role-specific questions, capturing feedback, and exporting it as a professional PDF report for HR.
